

Listing of Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously Presented) An apparatus that moves a jumping element, comprising:

a housing;

a motor attached to said housing;

a hub coupled to said motor and adapted to be coupled to the jumping element; and,

an audible indicator coupled to said motor to provide an indication of a motor characteristic.
2. (Cancelled)
3. (Original) The apparatus of claim 1, wherein said indicator includes a speaker.
4. (Original) The apparatus of claim 1, wherein said motor characteristic is a speed of said motor.
5. (Original) The apparatus of claim 1, further comprising a crank arm that is coupled to said hub and the jumping element.
6. (Original) The apparatus of claim 5, wherein said hub includes a spring that exerts a force onto said crank arm.

7. (Original) The apparatus of claim 1, wherein said hub rotates the jumping element about a horizontal axis.

8. (Original) The apparatus of claim 1, wherein said hub rotates the jumping element about a vertical axis.

9. (Previously Presented) An apparatus that moves a jumping element, comprising:

a housing;

a motor attached to said housing;

a hub coupled to said motor and adapted to be coupled to the jumping element; and,

audible indicator means for indicating a motor characteristic of said motor.

10. (Cancelled)

11. (Original) The apparatus of claim 9, wherein said indicator means includes a speaker.

12. (Original) The apparatus of claim 9, wherein said motor characteristic is a speed of said motor.

13. (Original) The apparatus of claim 9, further comprising a crank arm that is coupled to said hub and the jumping element.

14. (Original) The apparatus of claim 13, wherein said hub includes a spring that exerts a force onto said crank arm.

15. (Original) The apparatus of claim 9, wherein said hub rotates the jumping element about a horizontal axis.

16. (Original) The apparatus of claim 9, wherein said hub rotates the jumping element about a vertical axis.

17. (Previously Presented) A method for operating an apparatus that moves a jumping element, comprising:

activating an apparatus that includes a motor coupled to a jumping element;

changing a speed of the motor; and,

audibly indicating the change of motor speed.

18. (Cancelled)

19. (Original) The method of claim 17, wherein the jumping element is rotated about a horizontal axis.

20. (Original) The method of claim 17, wherein the jumping element is rotated about a vertical axis.

21. (Previously Presented) The method of claim 17, further comprising detaching the jumping element from a hub coupled to the motor.
